Systems/Tooling	Git, CI/CD, Docker, GDB, Valgrind , Build Systems (e.g., CMake, Cargo, Pip), Cross-language Linking , Static/Dynamic Libraries, and FFI (e.g., C bindgen)
Area of Expertise	Compiler Construction and Optimizations , Programming Languages, IR Design and Implementation , Type Systems, Language Support Tools (e.g., LSP), Static Analysis, Parsing Techniques and Parser Generators (e.g., ANTLR), Rustc Internals, LLVM

PUBLIC CONTRIBUTIONS (SELECTED)

2024-Present	Contributions to the Rust compiler, focusing on type systems, diagnostics, and layout computations — by fixing some Internal Compiler Errors (ICEs) and implementing new features <ul style="list-style-type: none">• Add TooGeneric variant to LayoutError and emit Unknown (closed but merged)• Use the type-level constant value ty::Value where needed• Report the note when specified in diagnostic::on_unimplemented
2025-Present	Maintainer of the Tide Compiler , an agnostic IR and compiler framework written in Rust Tide aims to be a modular and extensible framework for building compilers and language tools, prioritizing simplicity and ease of use. Region-based memory management provides a middle ground between manual memory management and automatic garbage collection, enabling efficient memory usage without the overhead of tracing GC. Research is ongoing on how to preserve separate compilation without compromising modularity or performance.
2025-Present	Contributions to the Rustworkx graph library, focusing on implementing the Closeness Centrality algorithm for weighted graphs (following Newman's method) and integrating it into the Python bindings <ul style="list-style-type: none">• Generalizing Closeness centrality to weighted networks using Newman method (issue 1384)
2024-Present	Maintainer of the cross-platform tgt project and tdlib-rs TDLib bindings written in Rust Tgt is a TUI (Terminal User Interface) client for Telegram, built using the tdlib-rs library, which provides safe and idiomatic Rust bindings to the official TDLib (Telegram Database Library) C++ library. Thanks to CI/CD pipelines, we ensure (i) that the projects build and work correctly on Linux, macOS, and Windows, (ii) automatic releases on GitHub and crates.io, and (iii) automatic documentation generation.
